CERTIFICATIONS

We declare that **FIAMM-GS S.p.A.** Quality Management System is certified according to **UNI EN ISO 9001:2000**.

Batteries have the following certifications:

- **“UL” (Underwriters Laboratories Inc.)** for SAFETY according to **UL 1989** (File n° **MH21072** and n° **MH 20182**) with verification quarterly
- **V.d.S.** (German certificate) for PERFORMANCE
Consult our catalogue for the specific battery

Valve Regulated Lead Acid batteries with internal Oxygen recombination produce very limited quantity of Hydrogen during the charging phase (2ml/Ah/cell/month at the floating charge voltage of 2.27V/cell). As such no special battery room or cabinet is required and the batteries can be installed even in close proximity to other DC or AC equipment. However a proper ventilation has to be provided in accordance with the technical standard **CEI EN 50272-2** (Safety requirements for secondary batteries and battery installation Part 2: Stationary batteries).
